

Thesis figure visual language — hue = regime · marker = mechanism · shade+linestyle = K

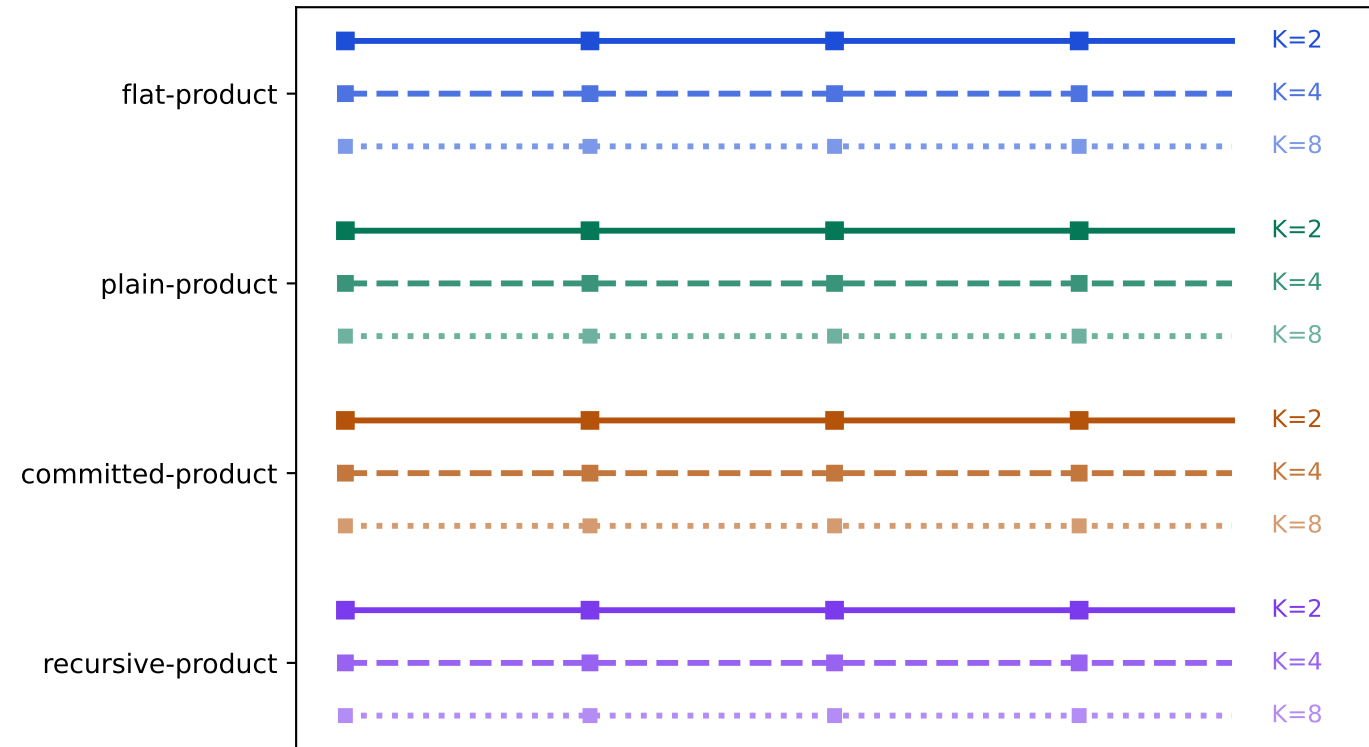

The grid: column = hue moves · row = marker moves
(forbidden diagonal moves both)

Role = marker SHAPE (orthogonal to hue/shade)
◇ open = part (segment/inner) · ◆ filled = stitch (glue/outer)
total = mechanism marker (■ here), drawn like flat — no bold needed
example: plain-product, K=4

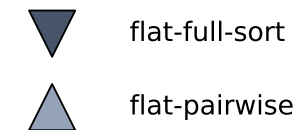

K → shade (lighter) + linestyle (— -- ···)
larger K reads lighter & more broken-up

Non-grid palettes
